

# Smoothwall Cloud Scan

Detect harmful images in your  
cloud storage.

## What is **Cloud Scan**?

Smoothwall Cloud Scan is a quick and easy way to help keep your cloud storage free from harmful or noncompliant imagery.

## How it works

Smoothwall Cloud Scan uses an AI image classification tool to accurately scan your school/college's cloud storage every 24 hours, and flag any images considered to be a risk.

Flagged images are categorised according to risk type. Your designated staff (usually DSLs) are alerted and given a choice of response options, including deleting the image or marking it as safe.

# Cloud Scan

## features & benefits

---

✓ **Make images safe within 24 hours**

Full contextual data and image categorisation allow designated staff to see, assess and act immediately. Images can be made safe within 24 hours, without the need for further investigation, resulting in minimal disruption to their day and no reliance on IT intervention.

✓ **No IT burden:**

Designated staff's full contextual data allows them to make immediate decisions without requiring IT support or intervention, saving valuable IT time.

✓ **Supports compliance**

By scanning for harmful imagery, Cloud Scan adheres to the UK Safer Internet Centre's Appropriate Monitoring Guidance.

It addresses risk categories associated with imagery identified in KCSIE, including risqué and porn.

It also provides designated staff with evidence which can be used as 'good reason' to suspect a file and therefore examine or erase it in line with your school/college's policy.

Aligning with a school's specific acceptable use policy for cloud storage, it prevents access to prohibited content, promoting responsible digital citizenship.

Detailed insights support investigations and due diligence in addressing potentially harmful imagery.

## Get in touch
